

# Unlocking Your Organization's Potential with Microsoft Co-Pilot: A Comprehensive Readiness Assessment

Are you ready to harness the power of Microsoft Co-Pilot and drive your organization into the future of AI-driven innovation?

The journey begins with a solid Security & Information Protection base.

Our framework offers a tailored approach to fortifying your organization's readiness for Co-Pilot, ensuring a seamless transition and maximum benefit.

At the core of our approach lies the identification and protection of sensitive data, supported by robust access controls and comprehensive security measures.

Let us guide you through the essential steps:

## **Baseline Security**

Define what "Sensitive Data" means for your business and pinpoint its locations across your environment. Utilize data discovery tools to uncover hidden vulnerabilities and review sharing policies to safeguard sensitive information.

Establish a data classification taxonomy with Information Protection Labels, ensuring granular control and minimizing data leakage risks.

## **Evaluate and Review Access Controls**

Audit and document current access controls, prioritizing group-based access and leveraging dynamic groups for automated IAM frameworks. Review group memberships to streamline access management.

## **Protect the Identities**

Implement Identity Security measures such as Multifactor Authentication and Conditional Access Policies to fortify identity protection. Ensure on-prem password protection and enforce strict identity verification protocols.

## **Device & Application Management**

Onboard devices to Intune for centralized management and enforce application protection policies to segregate company and personal data, ensuring data integrity across all endpoints.

## **Enhanced Security**

Review and refine content creation rights for Teams Channels and SharePoint sites, and review SharePoint sites for inclusion in Co-Pilot's Semantic Index. Implement Data Leakage Prevention Policies to safeguard against unauthorized access.

Continuously audit and monitor for security incidents, bolstered by robust Endpoint Protection measures and Identity Access Management practices.

Embark on your organization's Co-Pilot journey with confidence!

Let us guide you through the implementation of a robust Security & Information Protection framework, tailored to your unique needs and ensuring a seamless transition to Microsoft Co-Pilot.

**Together, we'll unlock the full potential of AI-driven innovation  
while safeguarding your most valuable assets!**
